CMO Publisher: conditional evidence for project 1014670613108

a) OAuth flow (consent, scopes, revocation) · b) Upload interface · d) Feature screens. CMO Publisher is a private command-line tool, so its "interface" is the terminal.

a) OAuth flow

Step	Evidence
1. Consent request	The owner runs `uv run cmo auth gaming --force`. The tool opens Google's standard OAuth consent screen (installed-app flow with PKCE, `prompt=consent select_account`). The owner chooses the channel and approves the three scopes below. Parameters of the actual request sent on Nov 8, 2026:

```
response_type = code
client_id = 1014670613108-tfo6s6cje0fo7m10depglrh3btfnrhkq.apps.googleusercontent.com
redirect_uri = http://localhost:53529/
scope =

  https://www.googleapis.com/auth/youtube.upload
  https://www.googleapis.com/auth/youtube.readonly
  https://www.googleapis.com/auth/yt-analytics.readonly
prompt = consent select_account
access_type = offline
code_challenge_method = S256
```

2. Scopes requested	**youtube.upload**: upload videos and set thumbnails on the owner's channel. **youtube.readonly**: read the owner's channel and own video list/status. **yt-analytics.readonly**: read analytics for the owner's own videos. No other scopes. No delete, comment, or channel-edit permissions.
3. Result	Terminal output after the owner approved: `✓ 'gaming' linked to YouTube channel: Side Quest Club`. The tool verifies the signed-in channel ID against its configured channel ID and refuses to save credentials for any other channel.
4. Token storage	The refresh token is stored only in a local file on the owner's Mac (`secrets/token_gaming.json`, git-ignored), never sent to any other server.
5. Revocation	Access can be removed at any time at **https://myaccount.google.com/connections** → CMO → "Delete all connections you have with CMO". This is documented in the privacy policy (https://cmokoro.github.io/cmo-app/privacy.html, section "Revoking access and deleting data"). Deleting the local secrets folder removes all stored tokens.

b) Upload interface: owner-approved uploads, private with scheduled publish time

b) Upload interface: owner approves, then the tool uploads

Real terminal output of CMO Publisher on the owner's Mac (rendered from the captured log; repeated progress lines condensed).

~/CMO

```
$ uv run cmo upload ambient   # session log, Nov 8 2026
